

MONJAIYE ADEBOYE

Software Engineer | Full-Stack, Web3 & AI Applications

Lagos, Nigeria • +234 705 691 5165 • monjaiye@gmail.com
GitHub: github.com/jaiy3 • Portfolio: <https://jaiyeadeboye-portfolio.vercel.app>

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with professional experience developing enterprise software and building modern web applications using React, TypeScript, Node.js, Express, PostgreSQL, and Prisma.

Experienced in REST API development, authentication, database integration, external API integrations, and real-time backend services. Built and deployed applications incorporating Redis, WebSockets, Docker, CI/CD, Web3 integrations, and AI-powered features.

First-Class B.Sc. Computer Science graduate focused on building scalable, maintainable software.

TECHNICAL SKILLS

Languages

JavaScript • TypeScript • Python • C# • C++ • SQL

Backend

Node.js • Express.js • REST APIs • WebSockets • JWT Authentication • Zod Validation • Redis • API Integration • Rate Limiting

Frontend

React • TypeScript • HTML5 • CSS3 • Tailwind CSS • Vite • React Router • Axios • Responsive Design

Databases & DevOps

PostgreSQL • Prisma ORM • Docker • GitHub Actions • CI/CD • Swagger/OpenAPI • Prometheus • Git • GitHub • Postman

Web3 & AI

Ethereum • Wagmi • RainbowKit • Viem • WalletConnect • Alchemy • OpenAI • OpenRouter

Deployment

Render • Railway • Vercel

FEATURED PROJECTS

MarketPulse — Real-Time Market Data API

TypeScript • Node.js • Express • PostgreSQL • Prisma • Redis • WebSockets • Docker

- Designed and deployed a backend-focused market data platform providing REST APIs and real-time market updates through WebSockets.
- Implemented PostgreSQL persistence with Prisma, Redis caching, paginated market-price history, JWT authentication, Zod validation, rate limiting, and structured error handling.
- Built real-time market data processing with WebSocket connections and external market-data integration, with health checks and Prometheus metrics for service monitoring.
- Containerized the application with Docker and deployed the production API using Render with managed PostgreSQL and Redis infrastructure.
- Documented API endpoints using Swagger/OpenAPI and automated build/test workflows with GitHub Actions.

AtlasAI — Web3 Portfolio Analytics Platform

React • TypeScript • Node.js • Express • PostgreSQL • Prisma • Wagmi • RainbowKit • Alchemy • OpenAI

- Developed and deployed a full-stack Web3 portfolio analytics platform for monitoring wallet portfolios, token balances, transactions, and market data.

- Built backend integrations for Ethereum wallet data, ERC-20 balances, transaction history, and live token prices using Alchemy and external APIs.
- Implemented wallet authentication and Web3 connectivity using Wagmi, RainbowKit, Viem, and WalletConnect.
- Integrated OpenAI/OpenRouter to generate AI-powered portfolio insights using application and portfolio data.

TeamFlow — Full-Stack Project Management Platform

React • TypeScript • Node.js • Express • PostgreSQL • Prisma • JWT

- Developed and deployed a full-stack project management platform with REST APIs supporting workspaces, projects, tasks, comments, and activity workflows.
- Implemented JWT authentication, request validation, relational database models, and Prisma migrations.
- Built responsive React interfaces for managing projects, tasks, collaboration, and activity history.

ApplyFlow — Full-Stack Job Application Tracker

React • Node.js • Express • PostgreSQL • Prisma • JWT • Zod

- Designed and developed a full-stack job application tracker with authentication, CRUD workflows, analytics, filtering, and validation.
- Built REST APIs and a responsive React dashboard backed by PostgreSQL and Prisma.
- Deployed the application with Vercel and Railway.

PROFESSIONAL EXPERIENCE

Backend Developer | Parallag Technologies | 2023–2025

- Developed and maintained backend functionality using C#, JavaScript, and Python across enterprise/client applications.
- Implemented software features, investigated production issues, and contributed to application stability and reliability.
- Participated in debugging, testing, and iterative improvements throughout the software development lifecycle.

Software Engineering Intern | Bluechip Technologies | 2022

- Contributed to a bank-grade cash management platform used by Nigerian financial institutions.
- Supported feature implementation, integration testing, and database validation.

EDUCATION

Babcock University | B.Sc. Computer Science — First Class

CGPA: 4.62/5.00 • Executive President, Graduating Class (BUGC) • Google Developer Student Club (GDSC)
